## Connector Clustering

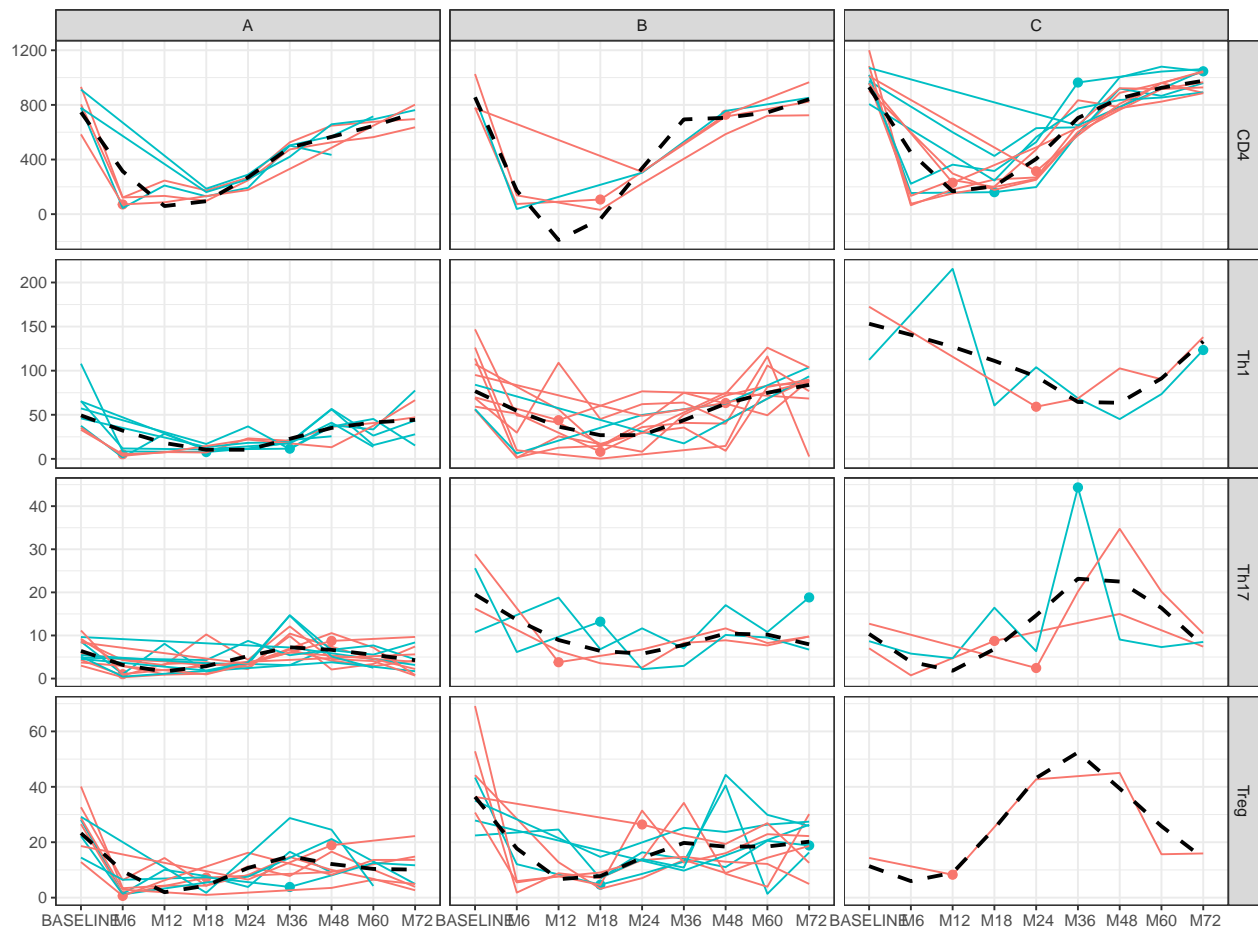

I primi plot rappresentano la divisione in cluster ottenuti usando CONNECTOR (le colonne) per ogni esperimento (le righe). I colori dipendono dai pazienti, il numero di relapse (in ordine).

## kmeans Clustering

Provo ad unire tutti i cluster che ho ottenuto nei vari esperimenti e ne faccio un secondo clustering (usando il metodo di kmeans algorithm) per trovare i gruppi di pazienti (meta-pazienti) che hanno clusters di connector simili.
